EXAMINER'S AMENDMENT

An examiner's amendment to the record appears below. Should the changes and/or additions be unacceptable to applicant, an amendment may be filed as provided by 37 CFR 1.312. To ensure consideration of such an amendment, it MUST be submitted no later than the payment of the issue fee.

Authorization for this examiner's amendment was given in a telephone interview with Anne Wang on March 22, 2006

The application has been amended as follows:

in claim 7, in line 2, after "a second end" , - - adapted to be - - has been inserted;

in claim 11, in line 2, "PEEK" has been changed to polyether-ether-keton - -;

claim 15 has been changed to read as follows:

- - The catheter of claim 14, further comprising an electrode lead wire fixedly attached to the distal tubing and extending with the outer plastic tubing and outside the proximal tubing. - -

The following is an examiner's statement of reasons for allowance:

none of the prior art of record discloses or suggests an injection catheter

comprising in part the combination of the following:an elongated catheter body

having at least one lumen extending longitudinally therethrough;

a needle control handle at the proximal end of the catheter body;

a needle electrode assembly extending through the catheter body and needle

control handle and having a proximal end attached to the needle control handle

and a distal end within the distal end of the catheter body; and

Art Unit: 3739

a mapping assembly, having proximal and distal ends, mounted at the distal end of the catheter body and comprising at least two flexible spines, each spine having a proximal end attached at the distal end of the catheter body and a free distal end, wherein each spine carries at least one electrode;

wherein the distal end of the needle electrode assembly is extendable past the proximal end of the mapping assembly upon manipulation of the needle control handle.

The closest reference found in the prior art was the PGPUBS No. US 2003/01019871 dated 6/12/2003 which discloses an apparatus for detecting and treating tumors using impedance mapping, but which lacks the specific disclosure of each spine having a proximal end attached at the distal end of the catheter body (note Figure 3 of the Applicants drawings)

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."

Allowable Subject Matter

Claims 1-17 are allowed.
